Bidding Cheat Sheet Table:

Bid Strategy	About	When to use
Manual CPC	While smart bidding is highly effective for brands that have an account history (meaning plenty of information that Google can use to optimize your accounts), manual CPC does have its own benefits. It allows you to set clear and very direct parameters around how much you're willing to spend for each click. This gives you the chance to be in control and make sure you aren't spending too much per click, especially while Google learns more about how to optimize your ads and ad delivery.	We recommend using the manual CPC bid strategy on any brand new Google Ads acc This gives you time to control how much y willing to spend per action to ensure profit while Google gets the data it needs to pro optimize your campaigns moving forward. At the end of the day, automated bidding strategies simply don't work well without significant amounts of data in the account
Enhanced Cost per Click (ECPC)	This bidding strategy works by automatically adjusting your manual bids for clicks that seem more likely to lead to a sale (or other conversion type!) on your website.	When you're ready to start testing Google's Smart Bidding but you don't want to jump straight into their full line of automation-fo bidding strategies, this is a good baby step You still have full manual control over your CPC bid limits, but you're still giving Google freedom and flexibility to increase your bid searches they believe are most likely to co all while maintaining your average CPC. This means that you will, on average, not p more than the max CPC, but a few high va opportunities may cost a bit more. If you s max CPC bid cap at $2, they might pay $2.2 a high value click but counteract it with a $ click after.
Maximize Clicks	Want to get as many clicks as you can and let the chips fall where they may? This is the strategy for you. The entire priority is driving clicks at the highest volume you can.	When you want to launch a brand new can or account and get data as quickly as poss The ultimate goal is to just get conversion volume so you can eventually transition to Smart Bid strategy.
Maximize Conversions (No tCPA Goal Set)	The focus here is to maximize the quantity of potential conversions; they'll show your ad to as many people as possible who are likely to convert at any level at any cost. You can choose to simply select the "Maximize Conversions" bidding strategy without setting a target cost per action (TCPA). This gives Google free reign to find you as many placements as possible where users are likely to convert as possible, without restrictions on cost.	This is a good bidding strategy to use whe campaign is already converting underneat ideal CPA goal, and you're not maxing out full campaign budget on a daily basis. If, for example, the CPA goal is $150 but w only spending $100 on the campaign daily a good sign that this may be a solid biddin strategy. The other scenario we find ourselves using Conversions bid strategy is on brand new campaigns within an account that has con conversion data. Setting a new campaign the gate to Max Conversions can help get early and jump start the learning phase. We only recommend using this on a new campaign that you are confident has a hig chance of working and you just want to ge action quicker than starting with Manual tl switching to a smart bid strategy after data collection.
Maximize Conversions (tCPA Goal Set)	This bidding strategy is a branch off of the Max Conv. strategy above, but with a CPA goal set limiting Google to focus on generating conversions at a set CPA.	You have a campaign that has a consistent volume of conversions and is hitting or clo your CPA goal.

		We use to recommend having at least 30-5 conversions in the last 30 days before swit to Max Conversions with tCPA goal, but no long as the campaign has consistency ever less than 30-50 conversions per month, th have had success switching over to Max Conversions with tCPA goal. Be careful when setting your tCPA goal – y can't force Google's automation to magica your goal if historically the campaign has r been performing.
Maximize Conversion Value (No tROAS Goal Set)	Just as you can focus on quantity of conversions with the above bidding strategies, you can also prioritize maximizing the value of your conversions. Not all conversions are created equal, after all. The ability to pay more for clicks that are likely to drive a $200 sale instead of a $100 sale, for example.	You should only ever use the Maximize Conversion Value once your campaign is a converting well under your return on ad sp (ROAS) goal, and you're not hitting your fu campaign budget. You can also launch a new campaign with t strategy if you are just trying to get high va conversions quickly to then start optimizin around a tROAS goal in the future. This particular bidding strategy works particularly well with Performance Max an Shopping Campaigns. Maximize Conversion Value can work with campaigns as well (especially DSA) but it d tend to work best for Shopping Ads.
Maximize Conversion Value (tROAS Goal Set)	This bidding strategy is a branch off of the Max Conv. Value strategy above, but with a tROAS goal set limiting Google to focus on generating conversions at a set tROAS.	Use this bidding strategy when you have a revenue-focused campaign— which will ty be a Shopping or Performance Max campa that is yielding a consistent volume of conversions *and* is either hitting or close to hitting your ROAS goal.
Target Impression Share	Instead of prioritizing a specific action, like getting as many clicks or conversions as possible, the priority here is to get as much of the impression share for your target keywords as possible. It also tells Google that you're willing to pay for a top ad spot, so you're showing up in a solid ranking position. For brands who want to aggressively expand their reach and build brand name recognition, this might be something that catches their attention.	The Target Impression Share bidding strat typically going to be used for Brand campa You want to always be at the top of the sea results (or at least as often as possible). If y willing to pay top dollar for a top ad spot regardless of the ROI. Think of this one a li like an ego play.

Bid Adjustment Cheat Sheet:

	Strategy Name	Strategy Type	Device	Geo	Ad Schedule	Audience (incl. RLSA)	Demographics	Calls
Smart[3] (Real-Time Automated)	Maximize Conversions with tCPA	Conversions	✓ Adjusts target CPA[1]	✗	✗	✗ [4]	✗	✗
	Maximize Conversions without tCPA	Conversions	minus ▼ 100% only	✗	✗	✗ [4]	✗	✗
